

PRESENTATION OF SERVICES

Experts in High-Altitude Work Services

IBERAT is a rope access company based in Spain with a large professional experience working worldwide. We provide a wide range of services with a focus in rope access training and operations.

Our team

All our technicians are IRATA certified, globally considered the highest standard in the rope access industry.

We are FROSIO certified as well for paint inspection.

We hand-pick the right team for each assignment.

North Sea, Germany (2014)

2. Working at Heights training.
3. Installation of anchors and lifelines.
4. Rope access operations.
5. Standby rescue teams.

Trinidad and Tobago (2016)

Grand Ethiopian Renaissance Dam, Ethiopia (2022)

1. Working at Heights consultancy

With a solid background in different industries, we can provide consultancy including risk assessment when heights become an issue. In collaboration with engineering departments we will find the best solution in terms of efficiency and safety.

2. Working at Heights training

Training is essential for safety.

In close collaboration with the HSE Department, we can plan and carry out the necessary courses for workers, both local and expatriate, to carry out their tasks at height, safely.

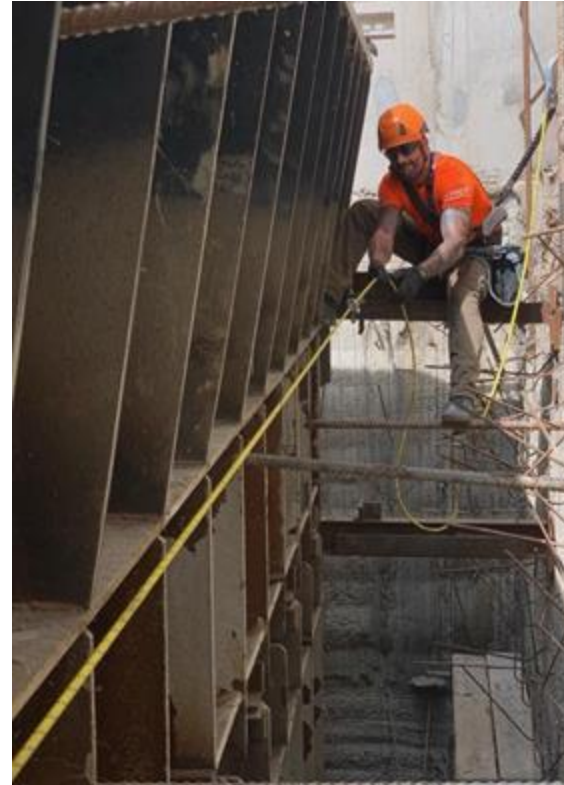

Grand Ethiopian Renaissance Dam, Ethiopia (2022)

Rope access training in Spain 2024

3. Installation of anchors and lifelines

Our team will select and install the anchors and lifelines required so that they can be used safely by workers.

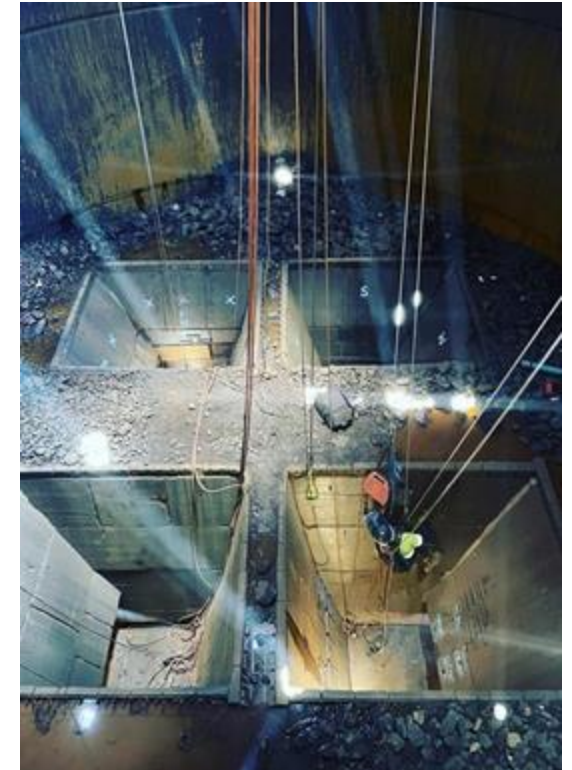

Western Australia and Grand Ethiopian Renaissance Dam, Ethiopia (2022)

4. Rope access operations

Inspection of structures, installation of components, drop objects removal, small repairs. We have a large experience in different industries: Oil & Gas offshore, Blade repair and maintenance work in the wind industry, dams and mining industry. The list of tasks that can be carried out through vertical work is endless.

Australia (2020)

5. Standby rescue teams

Our technicians have worked in a multitude of scenarios such as refineries, mines, Shipyards petrochemical plants or dams, providing rescue services at height to workers who carry out their tasks on scaffolding, confined spaces or slopes. Carrying out not only rescue tasks, but also preventing, so that intervention is not necessary through on-site advice.

Navantia Shipyard, Spain (2012)
